MMP 210

18 May 2021

What this project is supposed to be looking out at the snow through the window at night. While there is a snowman also outside and I used the arduino to make a led be as a candle. I wanted to look like a candle next to me looking at the snow falling at night. When I was using the arduino I did was trying to learn how to work with the led and was trying to see how much of the light of the led can blink and how the wires connect to the breadboard and the arduino. This was my first time using an arduino and I did not know what an arduino was until last couple of weeks. I am glad I was able to use this and can use this maybe later on.
